UK BRANCH NETWORK

BUSINESS MOVES

Whatever the nature of your business or industry, regardless of size or sector, our dedicated team of experts can help. Whether its corporate and employee relocation, office to office moves or storage and distribution services, all can be tailored into a bespoke solution.

MOVE MANAGEMENT

No business relocation is ever the same, that's why we tailor-make our Move Management service. Comprehensive project management, experienced move coordination, skilled space planning and efficient administration all make your move runs as smoothly as planned.

SPACE PLANNING SERVICES

Achieving the maximum use and efficiency of your space is crucial to the success of your move and the future of your business. We can advise on this and make sure you're compliant, as well as bring new ways of working to the environment.

CRATE RENTAL SERVICE

Our crate rental service uses clean, bespoke crates to help in moving smaller items safely and securely. After your move, they can even be used to help with storage of your affects in-house.

WAREHOUSE SOLUTIONS

Our secure storage facilities across the UK enable us to take care of your assets, furniture and equipment. Whether you need a temporary storage solution or a longer term, flexible resource, we can help.

SPECIALIST MOVES

The only common factor in moving hospitals, factories and libraries is they all have specialist, sensitive and delicate requirements. We have a proven track record in relocating these and many other unusual and heavy loads.

IT SERVICES

TechMate™ is our dedicated computer relocation service that enables your organisation to successfully move all your IT equipment with minimal interruption to your business.

UK BRANCH NETWORK

With specialist divisions and a nationwide branch network, we offer you local contacts and a specialist team regardless of where you're based or where you're moving too.

WASTE MANAGEMENT INITIATIVES

If your move generates waste, whether its IT equipment, office furniture, confidential files or paperwork, we'll always aim to recycle, remarket or reuse to minimise the impact on the environment.
